

**Managing energy costs is a strategic imperative for any organization wishing to remain competitive.**

## Take Control of Your Energy Costs

CES | PowerGREEN is an intelligent energy management technology that puts you in control of your energy assets and as such your energy spend. Our industry tested and approved systems, help lower your organization's energy costs without compromising production output or quality.

## Benefits

- **Adjustable Set Points:** Infinite rules-based controls that can be changed on demand
- **Demand Charge Control:** Reduce utility demand charges
- **Price Response Control:** Mitigate volatile energy prices
- **Demand Response:** Participate in lucrative DR programs where available
- **Capacity and Transmission Reduction:** In select markets, reduce your obligation of these components to further reduce energy spend
- **Business Intelligence:** Analysis and reports that support business making decisions
- **Sustainability:** Reduce stress on the electricity grid while reducing overall energy costs

## Customize Without Compromise

We work closely with our client's staff, combining their knowledge and operational approach with our industry-specific controls and analysis in order to maximize the safe reduction of load pertaining to all types of plant equipment with minimal operating impact.

## Can you Afford to Wait?

As market competition expands, organizations have no choice but to address the higher cost of energy in order to stay competitive. The good news is that without decreasing your overall loads you can significantly reduce your demand charges, which can represent as much as 40% of a commercial and industrial consumers electricity bill. Participating in energy efficient practices and demand response programs can lower costs even more.
